

Inspired by babies

A treasure basket is a basket containing a collection of objects that will support your child's development. Babies' brains develop by making connections which are as a result of being exposed to a wide range of sensory experiences.

By encouraging creativity and imagination, we are promoting children's ability to explore and comprehend their world and increasing their opportunities to make new connections and reach new understandings.

Serving suggestions

Spring onions are an excellent source of vitamin C and calcium. They are also a good source of dietary fibre and vitamins A and B6, thiamine, folate and minerals (potassium, copper, chromium, manganese, iron).

- When the shoots are four or five inches long, you can plant them in the ground or pot filled with good quality potting soil.
- If you keep the root ends in the jar, they will produce green shoots for a while but the plant will weaken eventually and stop producing.
- You can snip off what you want to add to your salad
- Snip off what you need to, cutting the leaves all the way to the ground; the onions will continue to grow in the ground almost indefinitely, although they could get to be much larger than the green onions you find in your grocery store.
- If they flower, you can use the flavourful blossoms in salads.
